

DISTRIBUTED GENERATION SERVICES

OPTIMIZE YOUR ENERGY ASSETS

Enerwise provides distributed generation and dispatch services to its customers as an alternate solution for economic real-time, synch reserve or certain capacity demand-response programs. In lieu of curtailing energy loads within your facility, generators can be used to offset peak loads or take advantage of favorable real-time energy rates. Depending on the size of your generator and the energy or demand pricing incentives offered per time of day, it is possible to offset utility power for a period of time, resulting in attractive financial benefits for your company.

Enerwise remotely monitors, manages and operates your generators, including the oversight of all critical parameters of your system 24/7. We also conduct periodic testing to ensure your generators will operate properly during emergency situations. This allows you to stay focused on your business operations while maximizing energy asset value and maintaining reliability.

Benefits of Distributed Generation Services:

- Remote monitoring of real-time generator data
- Analysis of time stamped data logs
- Centralized control and monitoring of remote assets
- Aggregate generation capacity
- Automatic scaling of your system as needs change
- Historical records to facilitate reconciliation of usage
- Alarming, notification and escalation processes
- Access to Enerwise ICC operations for 24/7 support
- Automatic load shedding, generator startup and relay control
- Sophisticated monitoring and control for standby generation
- Convert existing DG units from diesel to alternative solutions like scrubbers, natural gas, biofuels, etc.

With Enerwise, your company can plan energy consumption more wisely and can benefit financially from small changes.

ABOUT ENERWISE

Enerwise Global Technologies, established in 1980, is a leader in demand-response, energy infrastructure management and renewable energy services for commercial, institutional and industrial customers. We enable customers to reduce energy costs, comply with increasingly demanding environmental regulations, take advantage of alternative power initiatives, increase operational security and improve reliability. We deliver responsive, well-tested energy solutions, ranging from remote power monitoring and control systems to energy history analysis and real-time demand-response solutions.

Our systems and staff work around the clock to make sure you're always running smoothly and efficiently. Other companies depend on us to solve their energy problems; let us help you with yours.
